

# National report of Slovakia 2019

Branislav Droščák, Karol Smolík, Ján Bublavý, Martin Ferianc, Miroslava Majkráková, et al. <sup>1)</sup>

Juraj Papčo, Branislav Hábel, Peter Špánik, Martin Imrišek et al. <sup>2)</sup>

Katarína Leitmannová <sup>3)</sup>

Peter Vajda, Pavol Záhorec, et al. <sup>4)</sup>

1) Geodetic and Cartographic Institute Bratislava, Department of Geodetic control

2) Slovak University of Technology in Bratislava, Faculty of Civil Engineering, Department of Theoretical Geodesy

3) Geodesy, Cartography and Cadastre Authority of Slovak Republic, Department of Geodesy and Foreign affairs

4) Slovak Academy of Sciences, Earth study institute

**EUREF 2019 SYMPOSIUM**

TALLINN 22 May – 24 May 2019

MAA-AMET

KESKKONNAMINISTERIUM

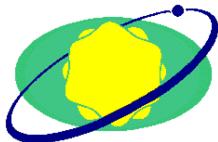

# Outline

- Slovakian activities towards to EPN
- News from:
  - SKPOS® (Slovak real time determination system)
  - national levelling network
  - national gravimetric network
- R&D
  - Geodetic and Cartographic Institute activities
  - Slovak University of Technology activities
  - Slovak Academy of Sciences activities
- Other news

# Slovakian EPN Operational and Local Analysis Centers

Geodetic and Cartographic Institute  
Bratislava (GKÚ) – EPN OC

Slovak University of Technology  
in Bratislava (SUT) – EPN LAC

# SUT - EPN Local Analysis Center activity

## EPN subnetwork computation:

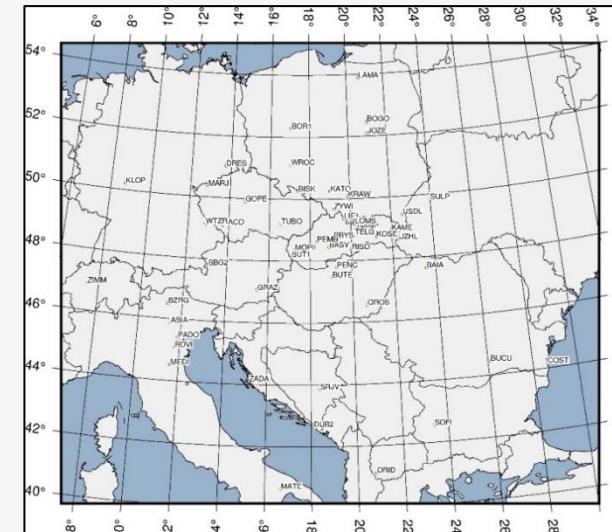

- 59 EPN permanent stations
- Bernese GNSS Software Version 5.2
- Reference frame IGS14

## Analysis Centre Solutions:

- Final Weekly Coordinate Solution (1180 - now)
- Final Daily Coordinate Solution (1180 - now)
- Rapid Daily Coordinate Solution with Galileo (2044 - now)

NEW

## CEPER network computation:

- 55 permanent stations from Central Europe region
- GPS/GLONASS and GLONASS only solutions (1774 – now)

# GKU – EPN Operational center activity

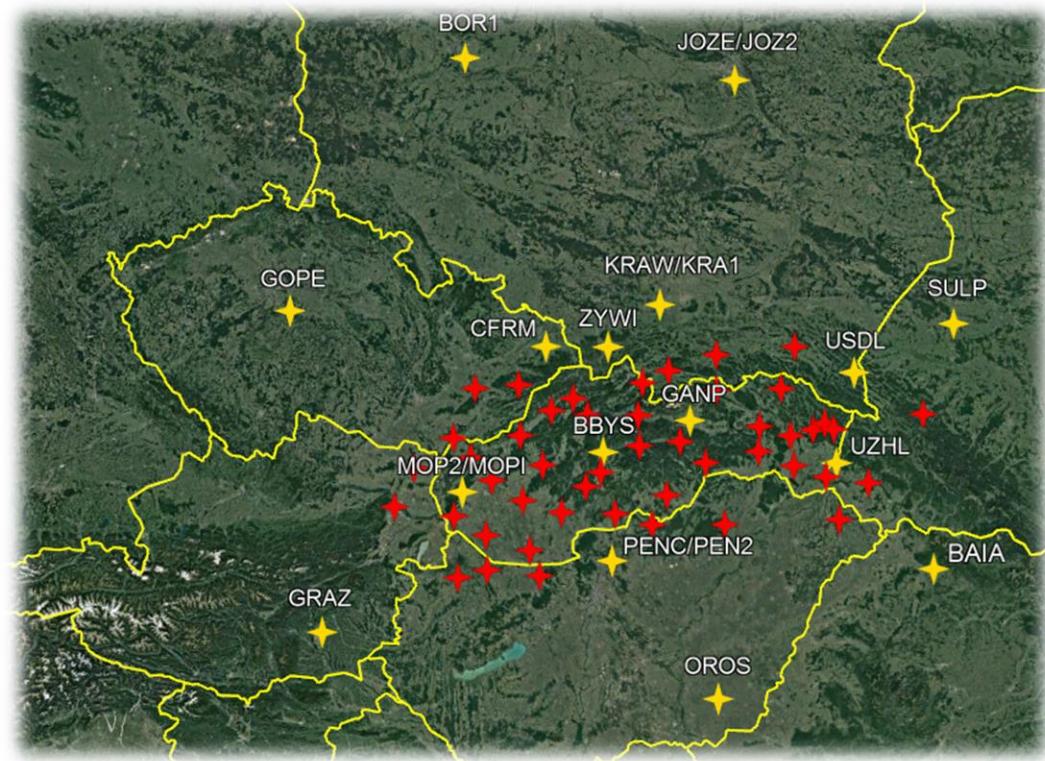

Bernese GNSS Software  
Version 5.2

Slovak subnetwork solution  
(GKUwww7.SNX):

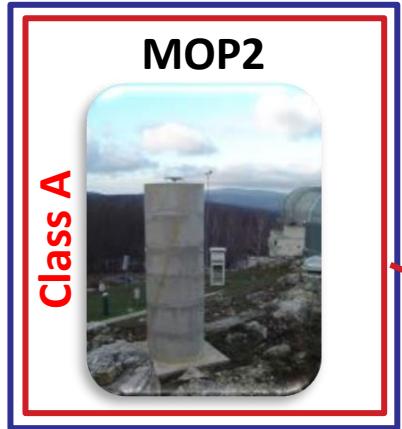

- weekly solution
  - 34 Slovak reference stations (4 EPN)
  - 32 foreign reference stations (14 EPN)
- New reference frame (IGS14) and an updated set of antenna calibrations (igs14.atx) adopted from GPS week 1983.

EUREF PERMANENT NETWORK  
DENSIFICATION

# Slovakian EPN permanent stations

## Slovakian EPN Real-time service permanent stations

Home / Network & Data / Maps

### Maps

Interactive Downloadable

SATELLITE SYSTEM: GPS GLONASS GALILEO BEIDOU QZSS SBAS

DATA FLOW: ONLY DAILY DAILY & HOURLY DAILY, HOURLY & REAL-TIME

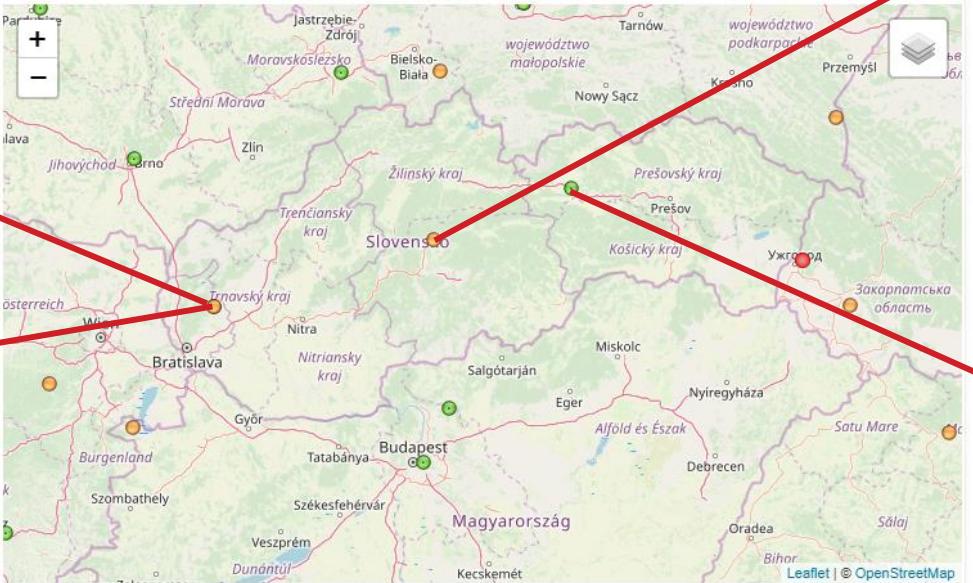

NETWORKS: IGS ITRF2014

Update map

STATIONS RESPONDING TO THE CRITERIA: - Select a station -

LEGEND:

- Providing daily, hourly & real-time data
- Providing daily & hourly data
- Providing only daily data

Slovak real-time positioning system

**SKPOS<sup>®</sup>**

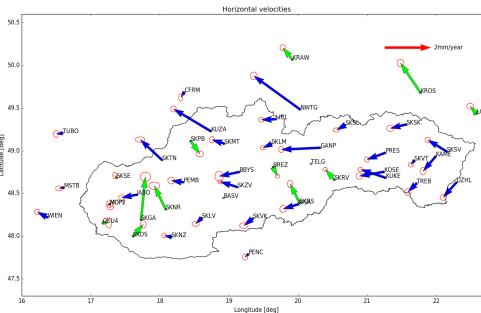

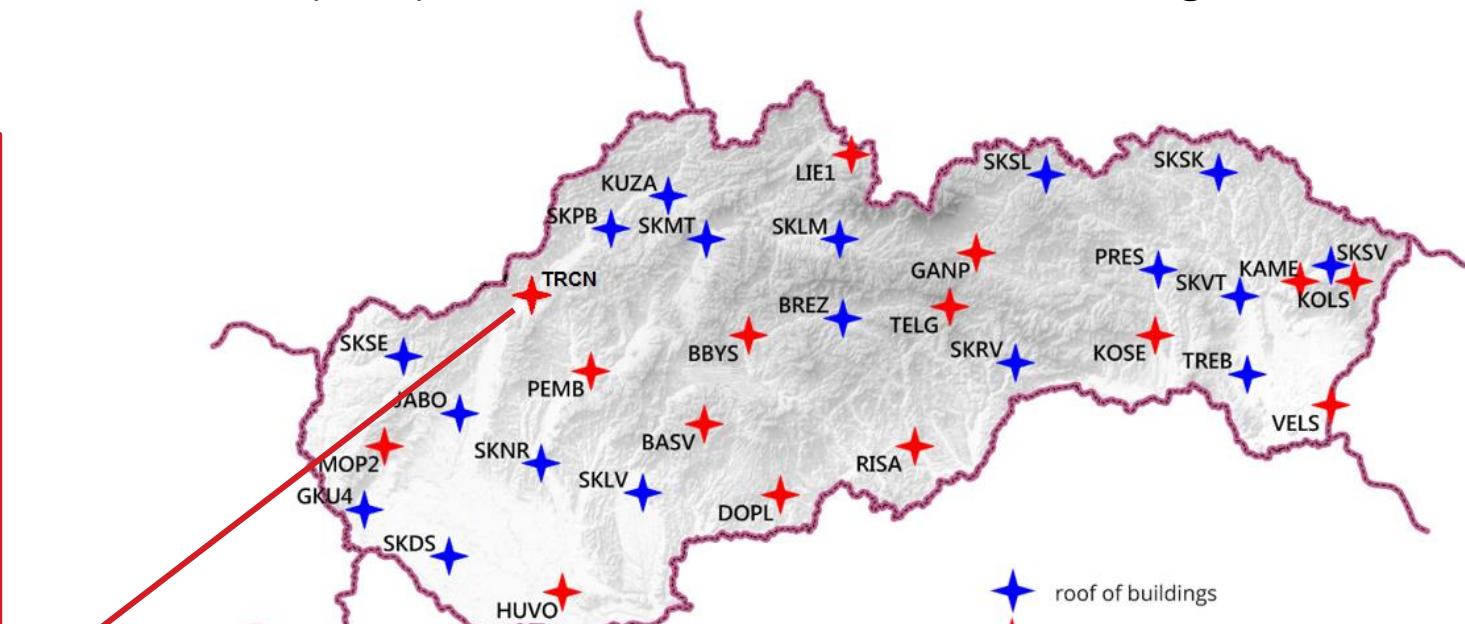

# CORS infrastructure (May 2019)

- **33 Slovakian reference stations (20 individual calibrated)**
  - 33/33 stations observe GPS+GLONASS+Galileo+BeiDou
  - Network density: average distance is 44,6 km
- **21 foreign reference stations (APOS, gnssnet.hu, CZEPOS, ASG-EUPOS, ZAKPOS)**

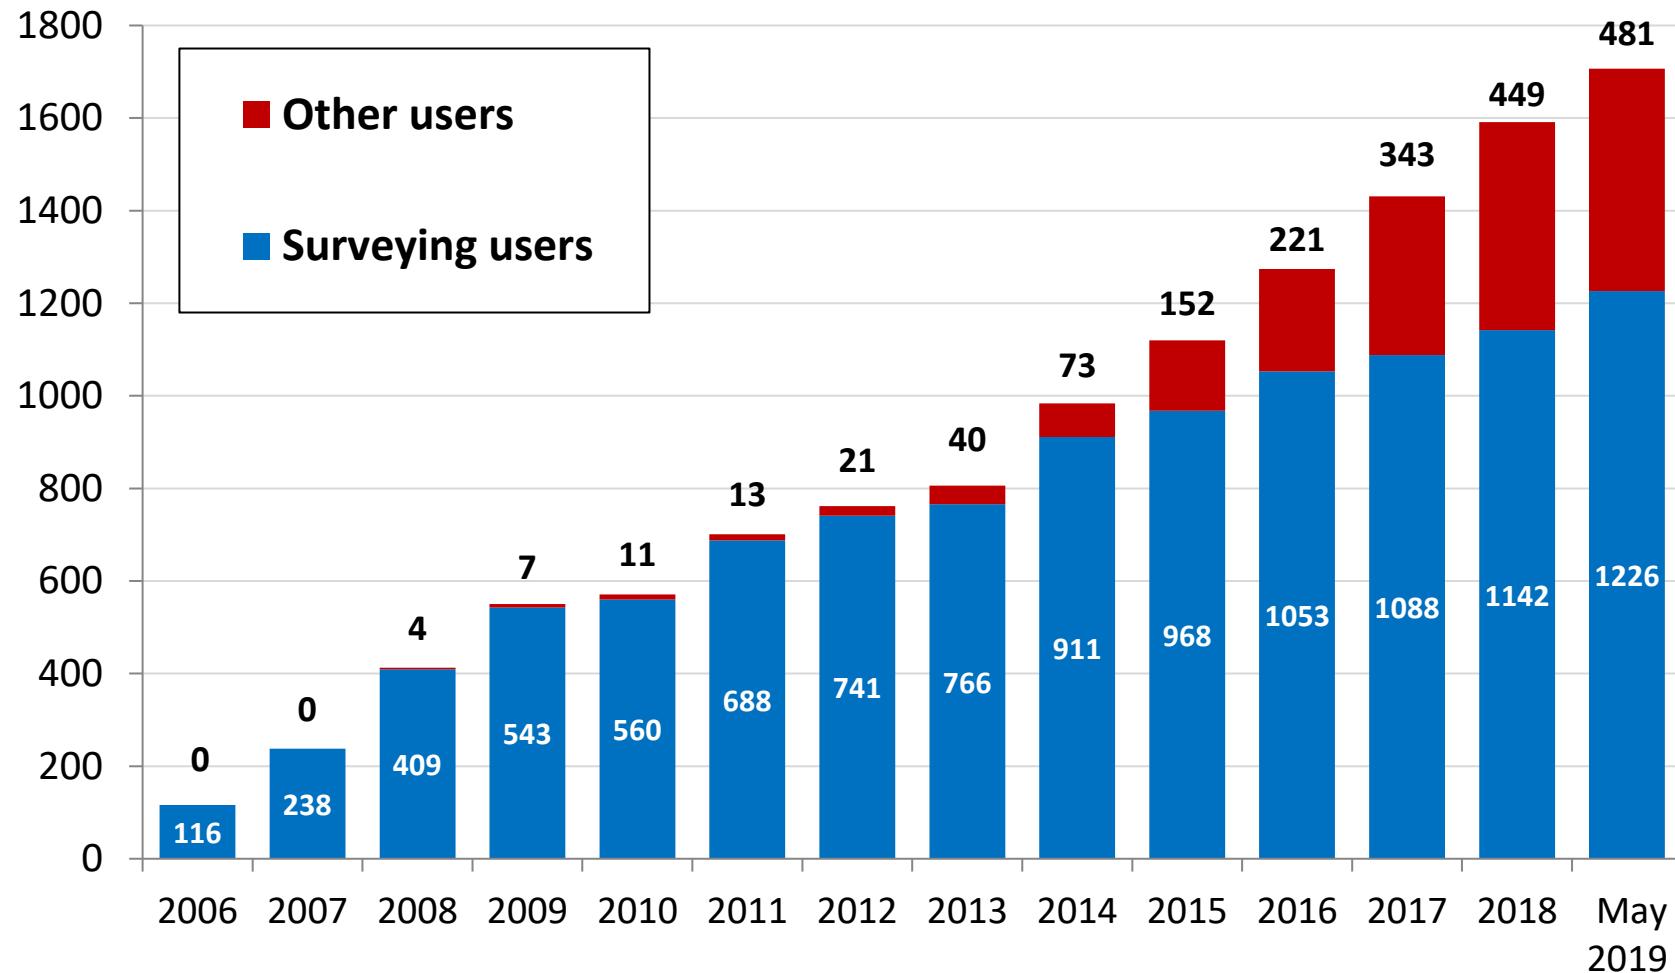

# CORS infrastructure for geokinematics

- 15 of 33 slovakian SKPOS permanent stations (45%) have monumentation suitable for geokinematics

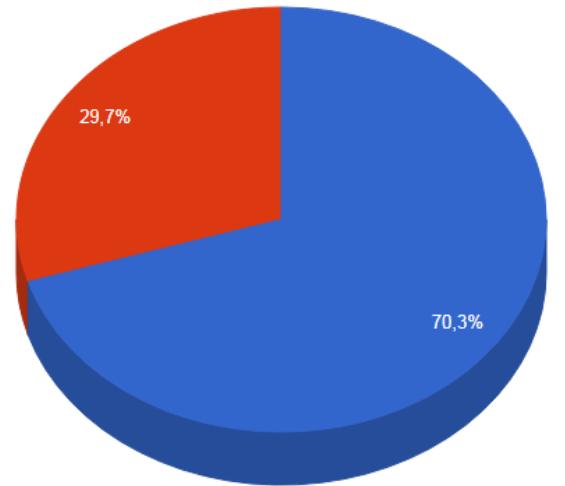

# Number of users

# Type of users

- Surveying fields (cadastre, surveying, mapping, GIS) - **70%**
- Other fields (precise agriculture, machine guarding) - **30%**

# Galileo and BeiDou full support

SKPOS	Component	Date of availability	
Hardware	Antennas		 33 (33) stations
	Receivers	 2018-10-12	 33 (33) stations
Software Trimble Pivot	RINEX from CORS		 33 (33) stations
	RINEX from VRS		
	RTK (VRS)	 2018-10-16

# National levelling network

## Height system

# Plan to switch to the new height system

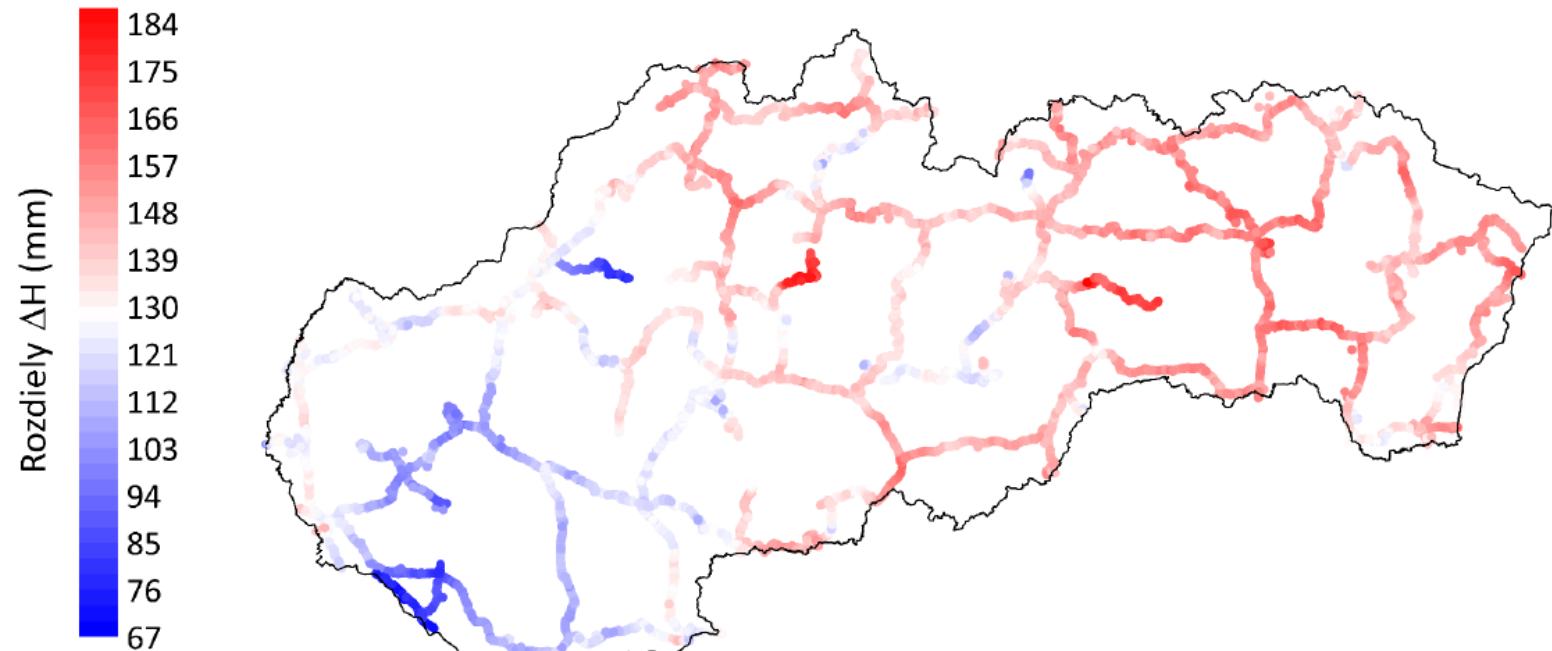

## Baltic (Bpv) → EVRS (EVRFyyyy)

- Present status (2019):
  - **Bpv** (Bpv 1957) EPSG:8357
  - Tide gauge: Kronstadt
  - Normal heights (Molodenski)
- Plan (cca from 2025):
  - **EVRS** (EVRF2018)
  - Tide gauge: NAP (Amsterdam)  $W_0 = W_{0E}$  (**NAP**)
  - Normal heights / geopotential numbers

# Plan to switch to the new height system

## Differences between Baltic (Bpv) and EVRS (EVRF2007)

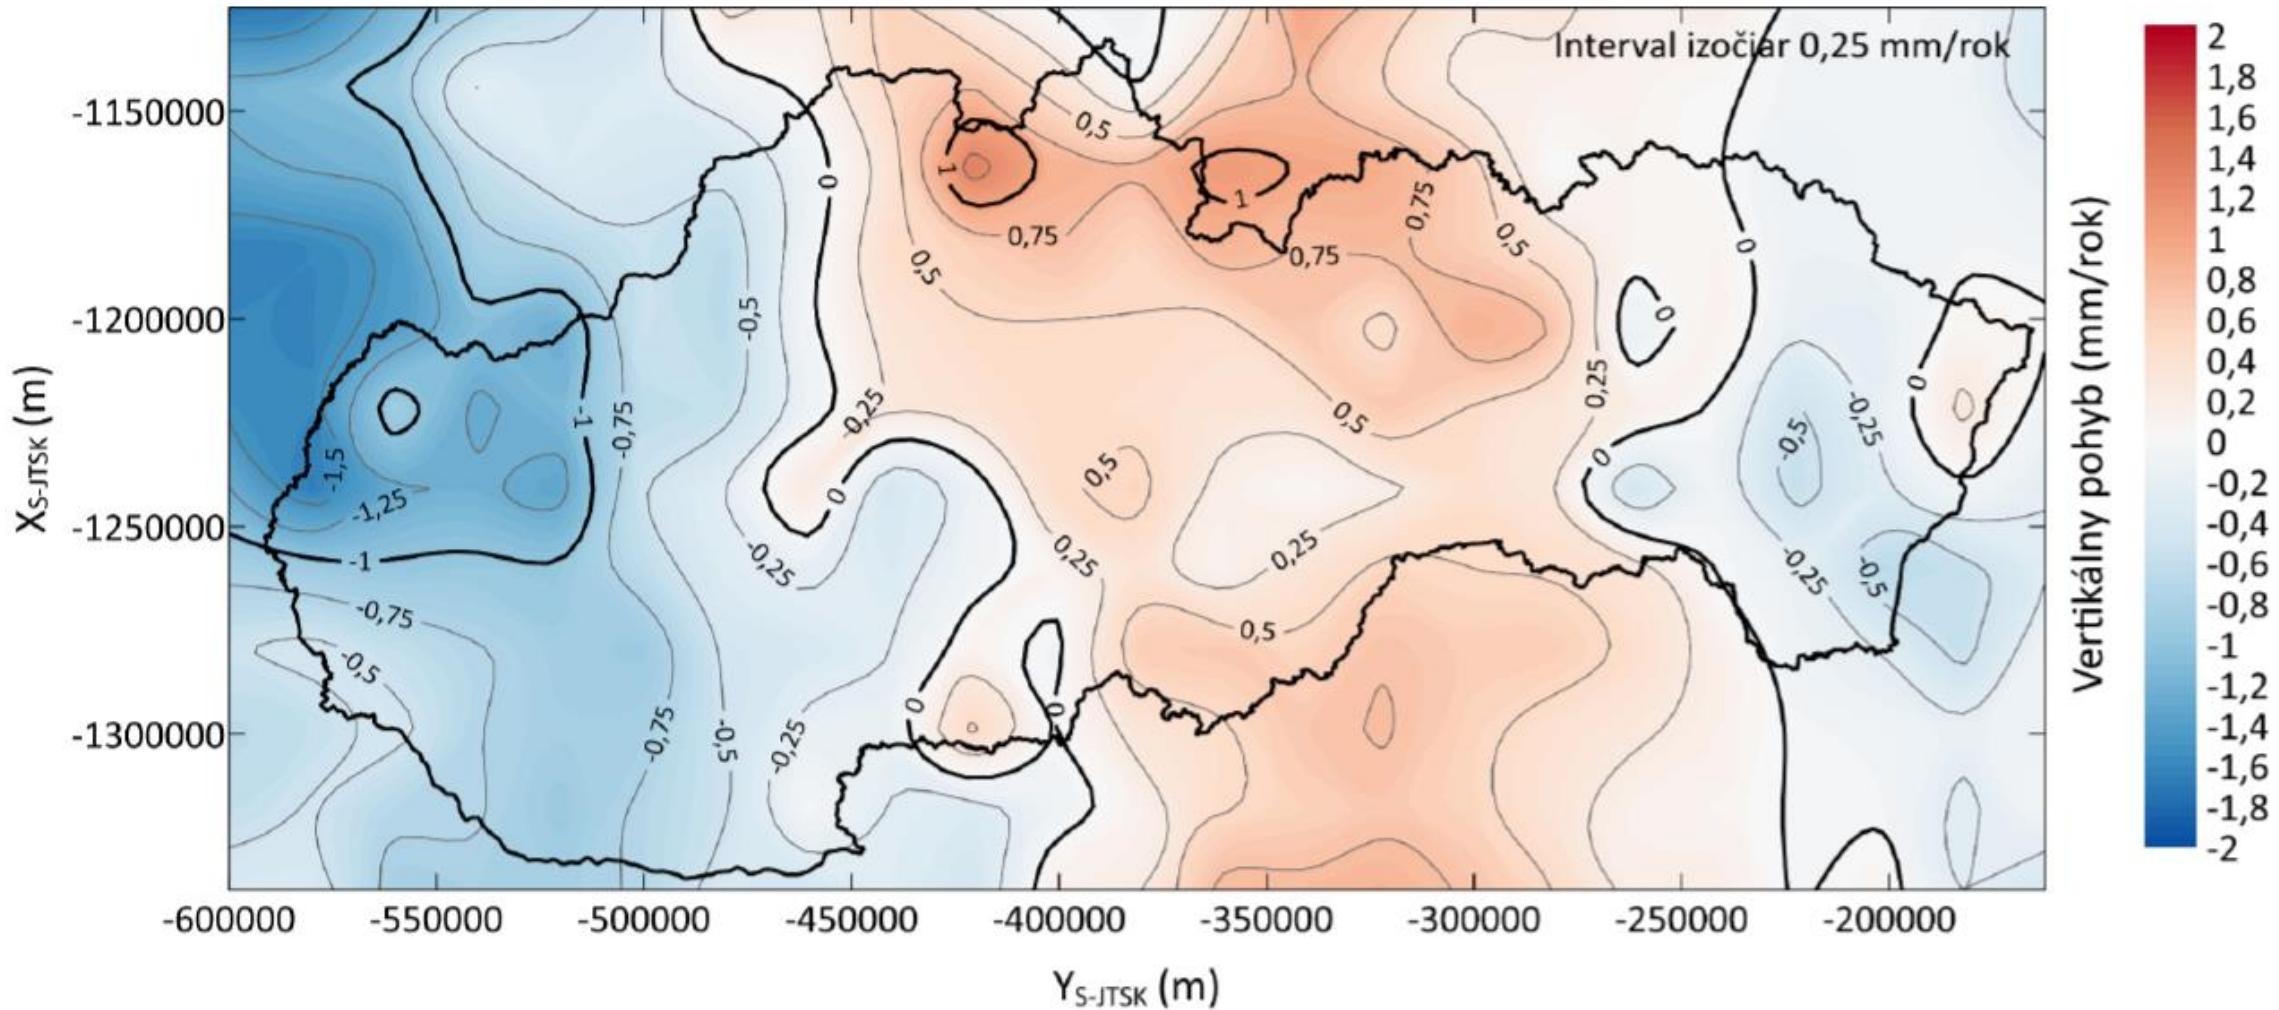

Differences (EVRS – Bpv)	
Number of values	13 753
Min value	67 mm
Max value	185 mm
Average	134 mm

Differences represents:

- Tide gauge difference (NAP – Kronstadt)
- Tide system difference
- Computation difference

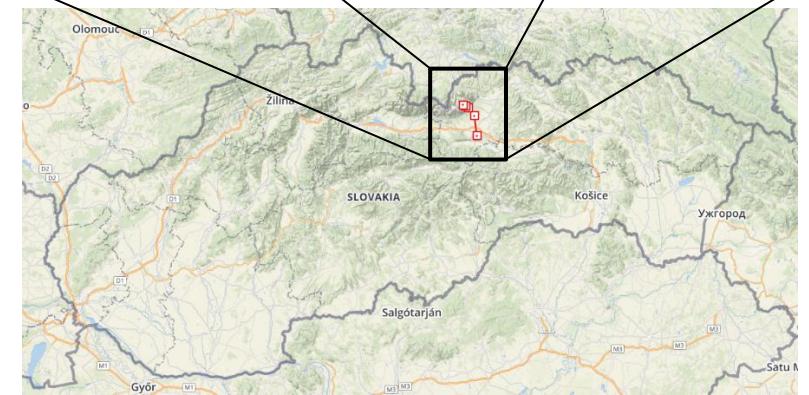

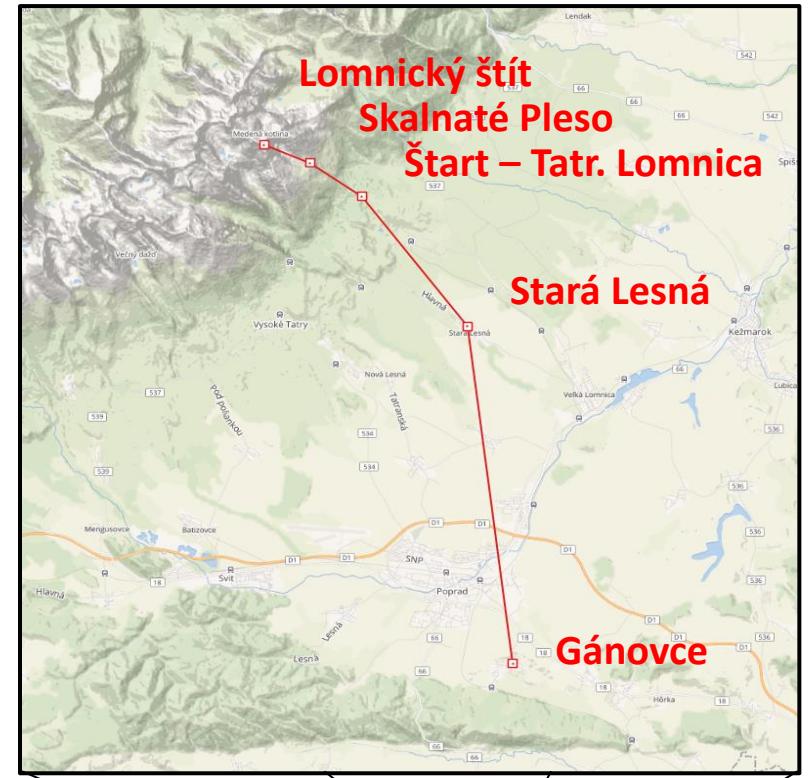

# Map of the recent vertical movements from spirit levelling (1949-2016)

National gravimetric network

# New absolut gravity measurements on the Vertical gravimetric baseline

- Locality: Tatra mountains (5 points)
- Gravity difference:  $\approx 441$  mGal
- Height difference: 1935 m
- Highest point: Lomnický peak 2634 m
- Absolute measurements
  - in 2016 and 2017: FG5X-251 (GOP, CZE)
  - In 2018: FG5X-247 (SUT, SVK)

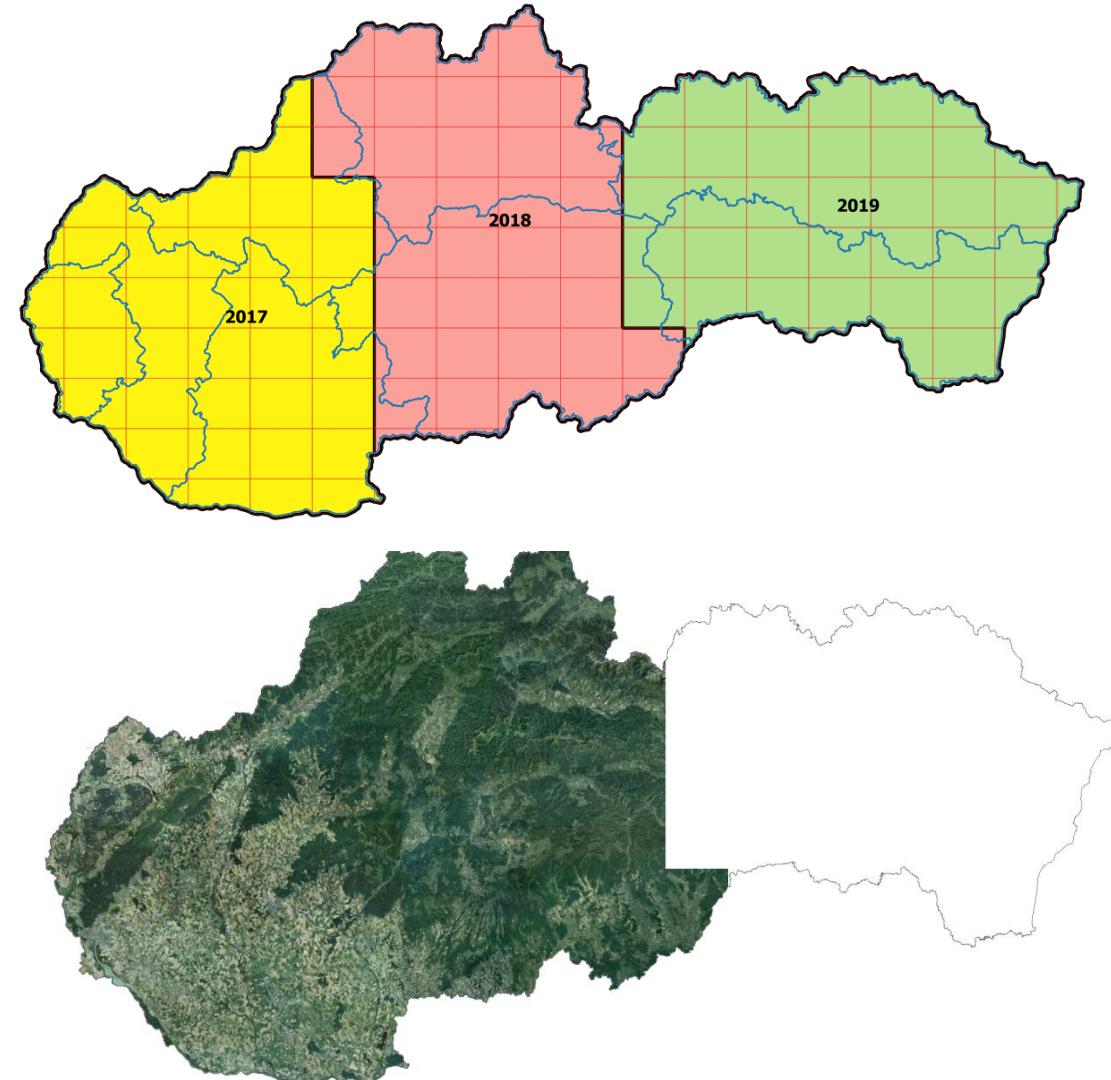

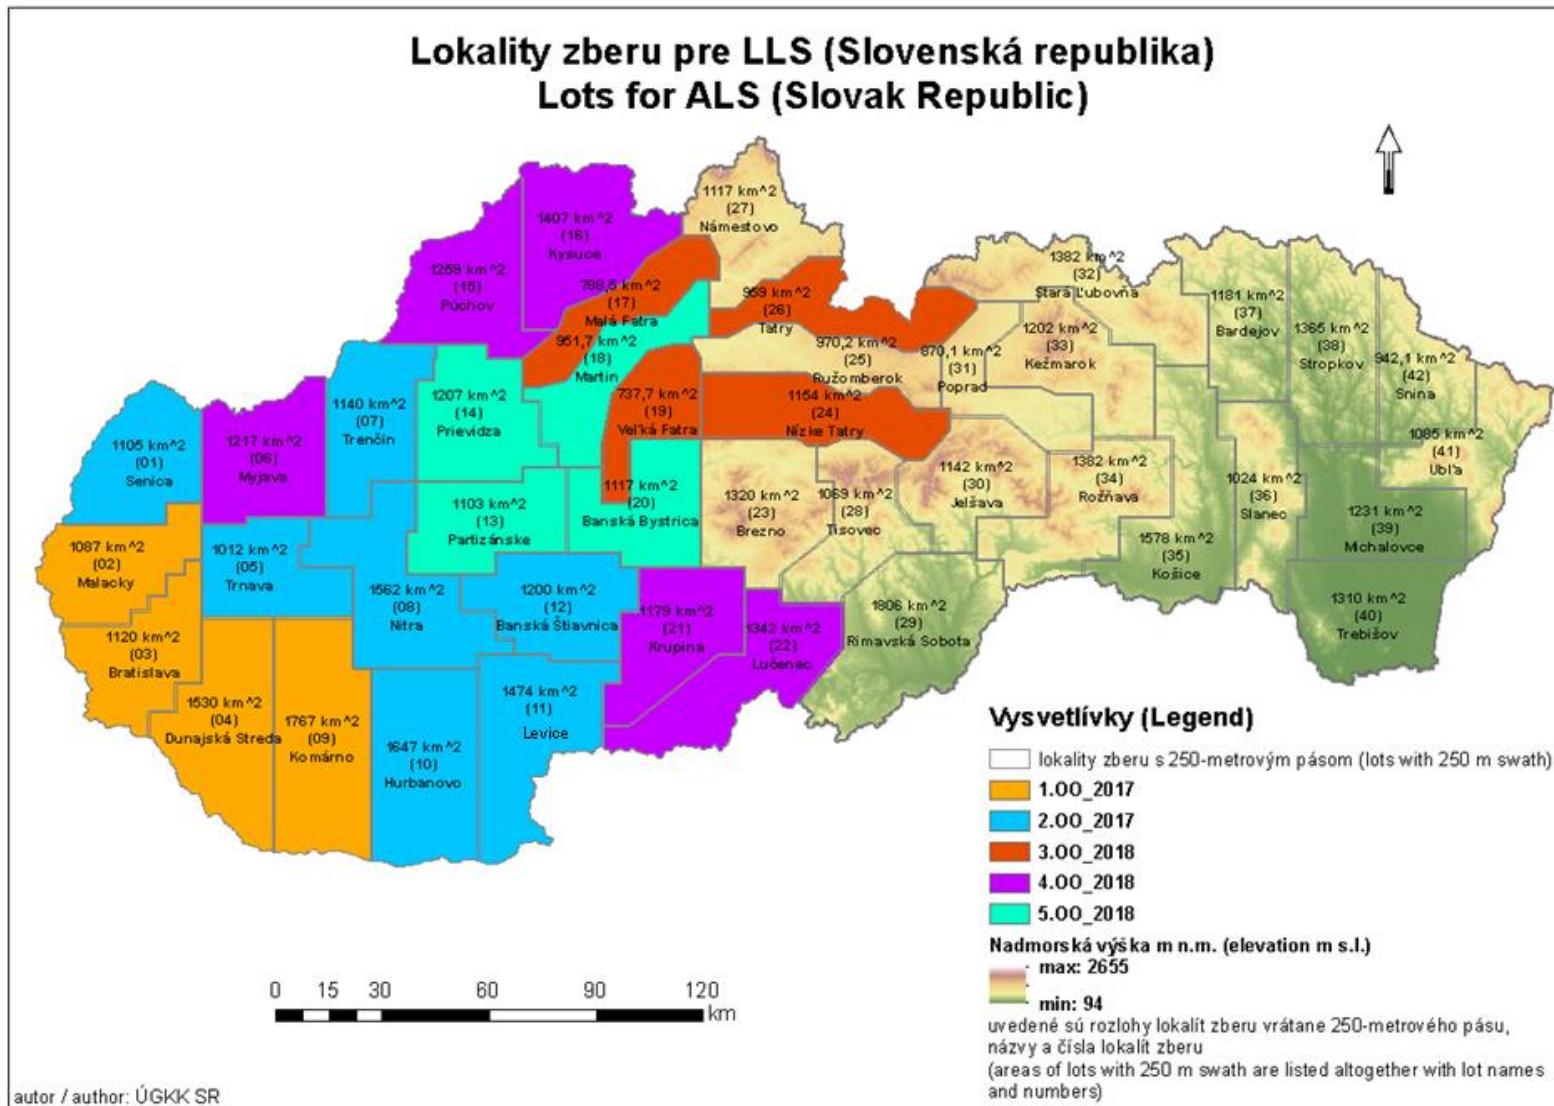

# Geodesy, Cartography and Cadastre Authority of Slovak Republic news

# Orthophotos of Slovakia

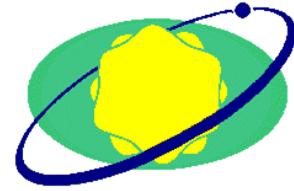

- Cooperation between GCCA and Ministry of agriculture
- Quality parameters:
  - GSD – 0,25 m,
  - RMSE<sub>xy</sub>=0,35 m (West part)
  - RMSE<sub>xy</sub>=0,30 m (Central part)
- Data are provided free of charge:
  - raster data
  - wms 1.3.0
  - Geoportal

# Digital elevation model (in progress)

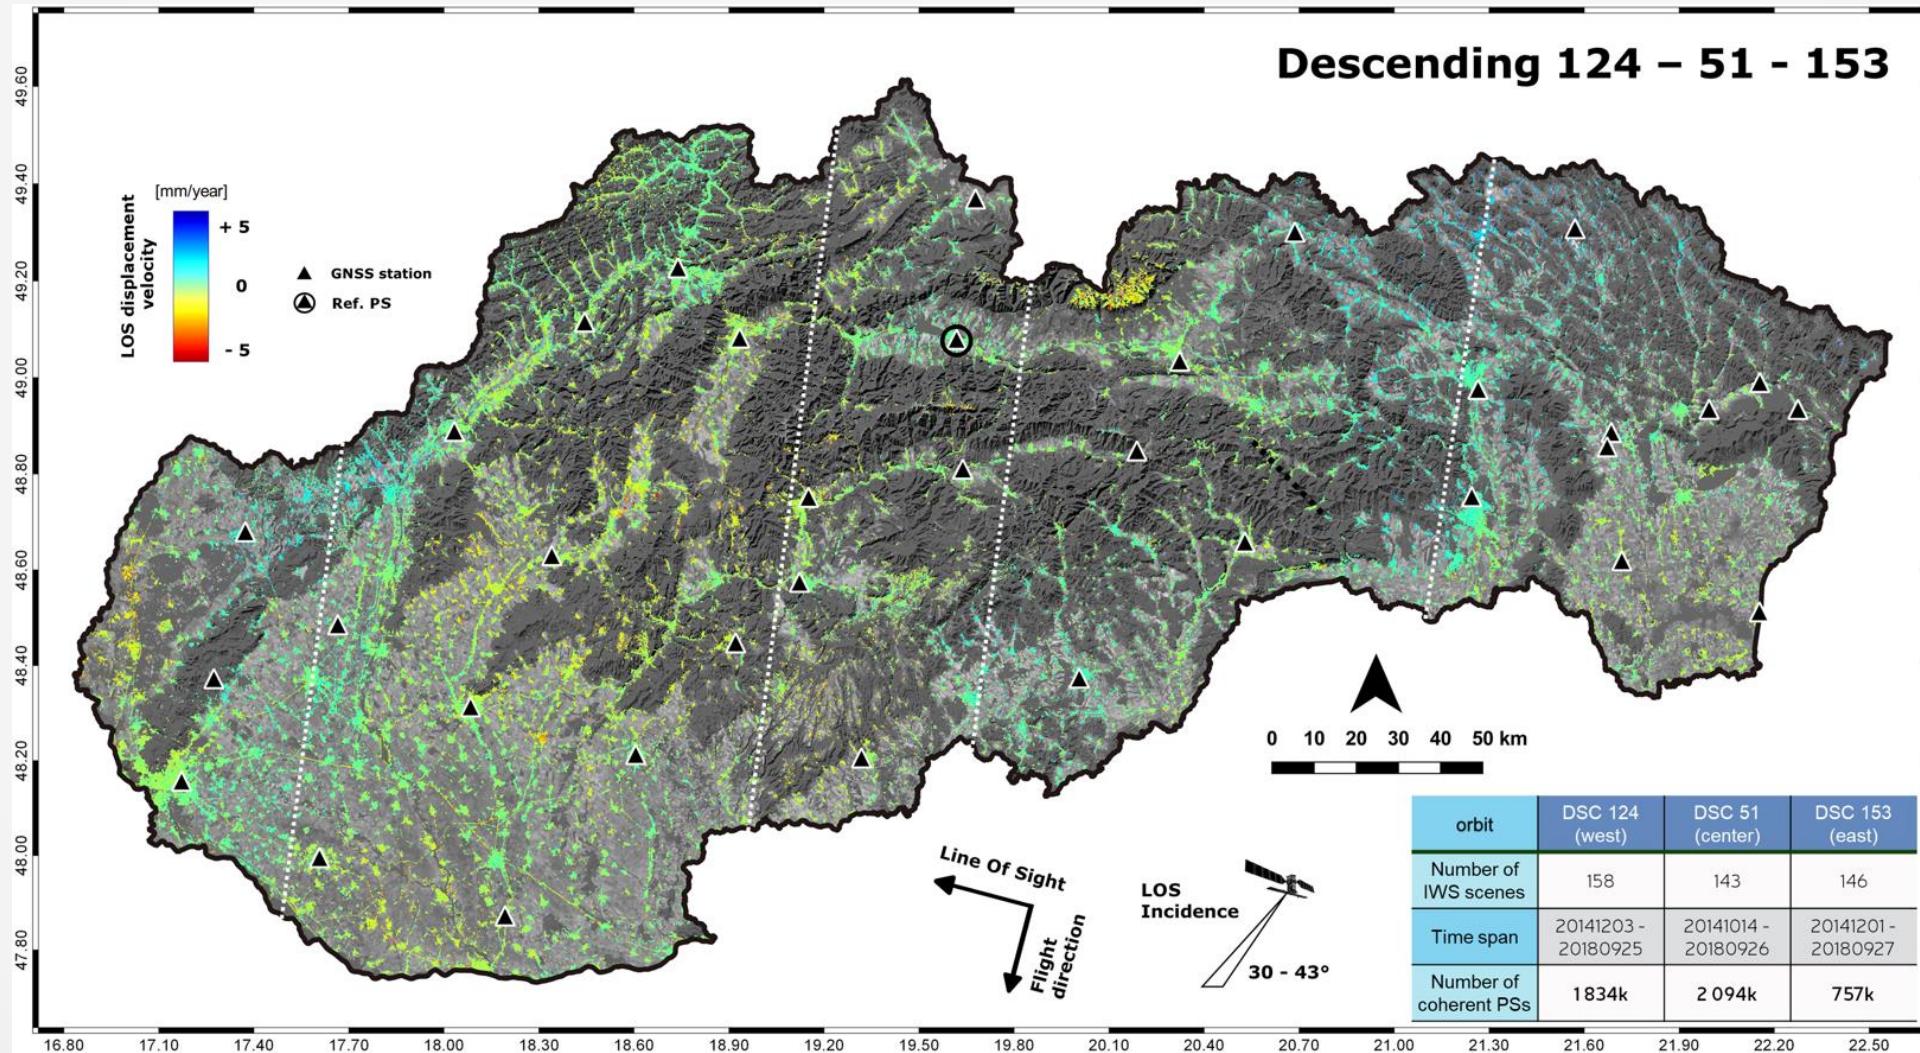

- airborne laser scanning
- density min.15 points/m<sup>2</sup>
- $m_{XY} \leq 0,50$  m in ETRS89-TM34
- $m_h \leq 0,11$  m in ETRS89
- DEM 1m resolution

Slovak University of Technology  
R&D activities

# PS InSAR Sentinel-1 satellite

## Surface deformation monitoring system for Slovakia (2014-2018)

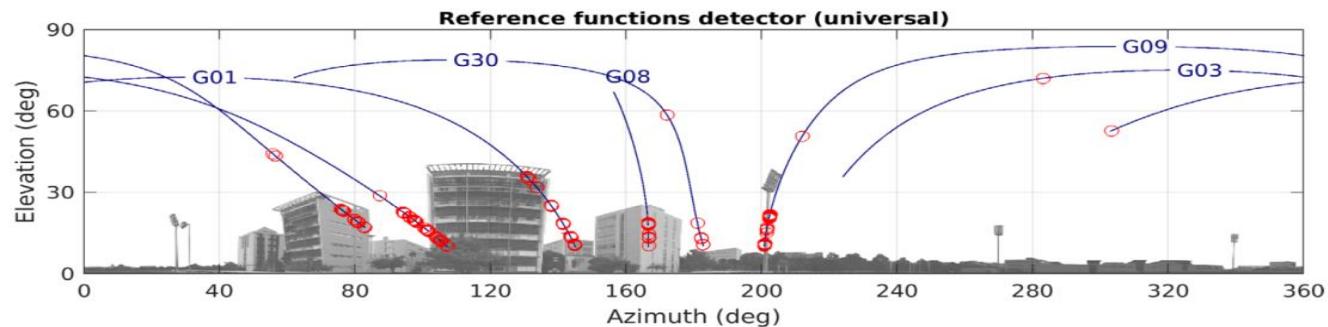

# New integrated geodetic and geophysical observatory in Hurbanovo

- Instruments: relative gravimeter gPhoneX #108, absolute gravimeter FG5X-247, accelerometer, permanent GNSS station, local weather station and soil moisture sensors.
- Applications to geodynamics research, geophysics, tides and hydrology.
- Institutions: Earth Science Institute of the Slovak Academy of Sciences, Slovak University of Technology in Bratislava and Geodetic and Cartographic Institute Bratislava.

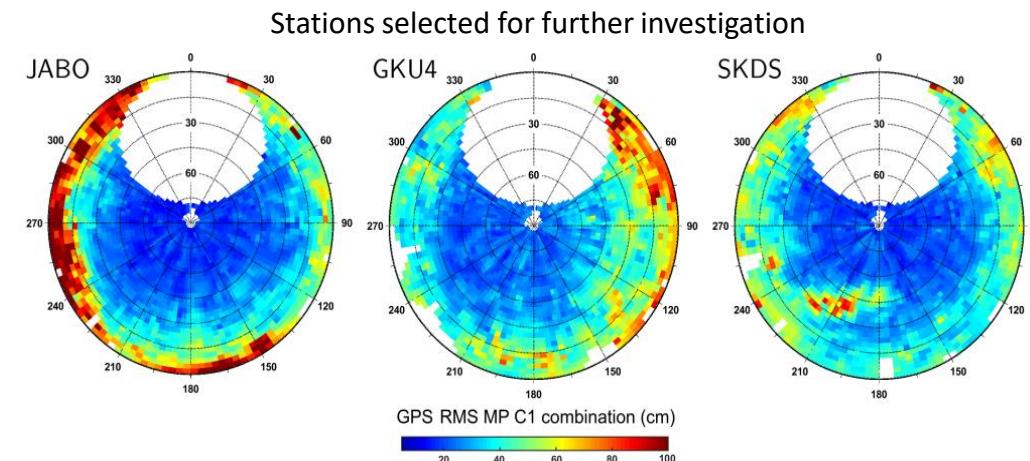

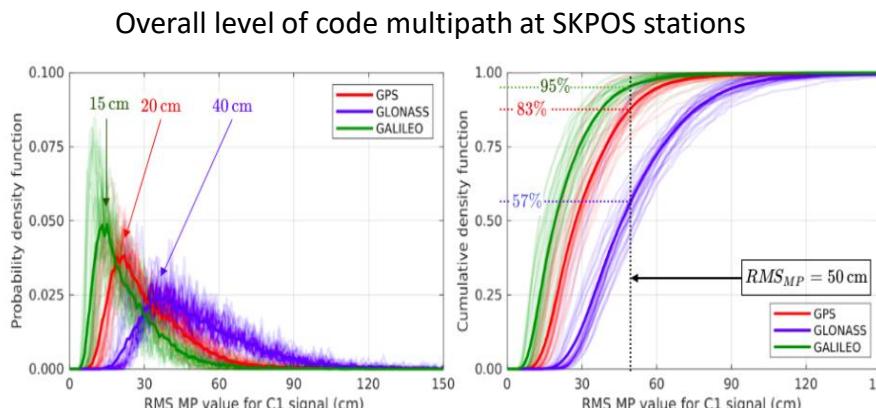

# GNSS phase multipath detection

- multipath detection using SNR combination
  - uses actual SNR values at 2 or 3 different frequencies and compare it with reference functions obtained from measurement in low-multipath environment
- Analysis of multipath effect in SKPOS® network
  - assess global level of code multipath in the network and to selected stations will be examined in more detail with DD residuals testing

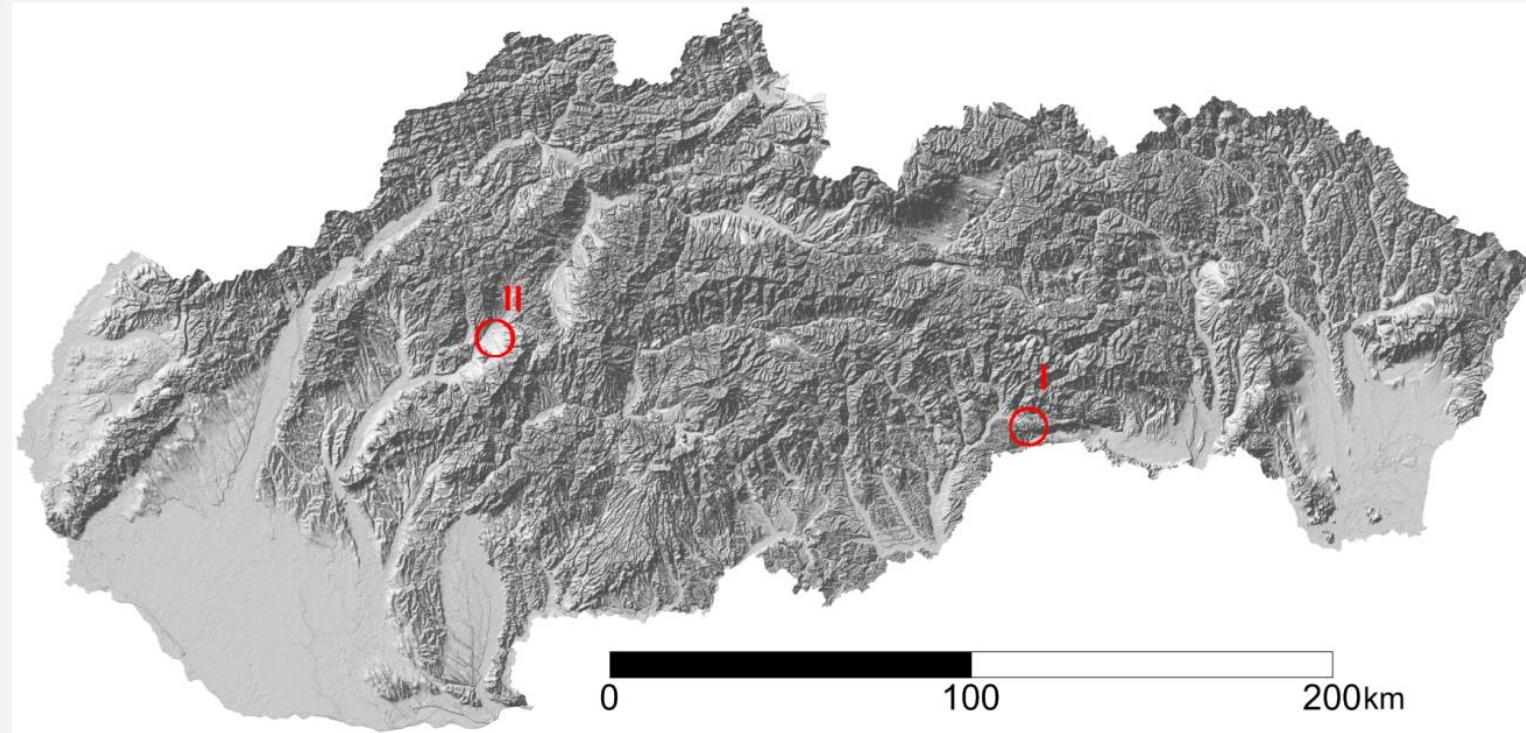

For more details see: Špánik, P., García-Asenjo , L. and Baselga, S.: Optimal combination and reference functions of signal-to-noise measurements for GNSS multipath detection, Meas. Sci. Tech. 30 (2019)

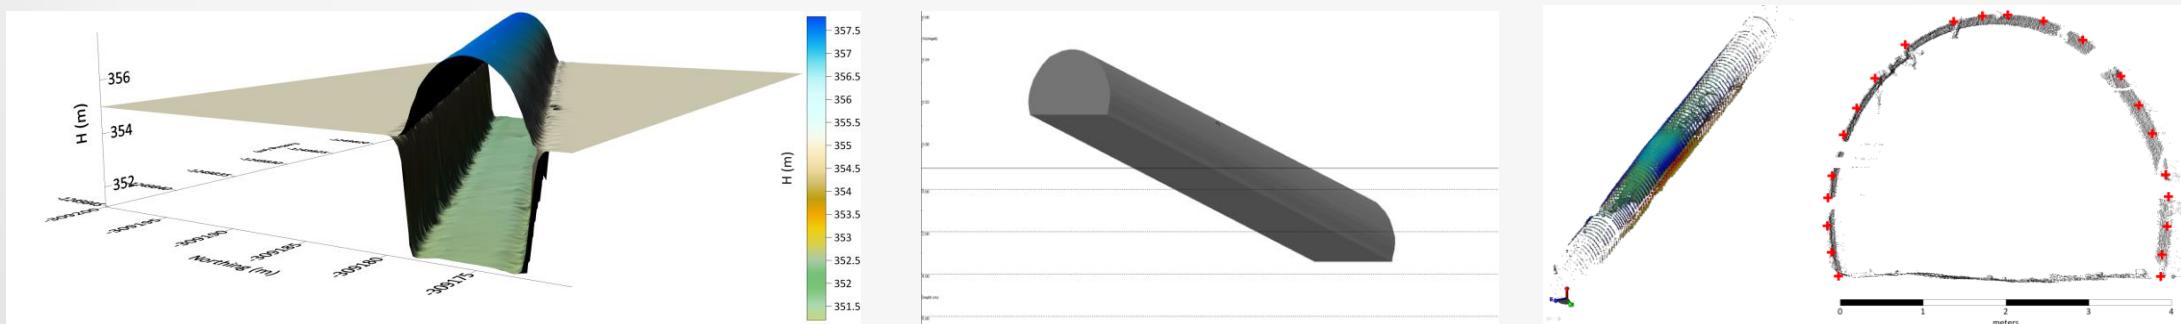

Slovak Academy of Science  
R&D activities

# MODERN APPROACH TO ROCK DENSITY DETERMINATION FROM UNDERGROUND GRAVITY MEASUREMENTS

- TWO CASE STUDIES
  - Case study I – railway tunnel in Mesozoic karst rocks
  - Case study II – active coal mine in Neogene sedimentary basin

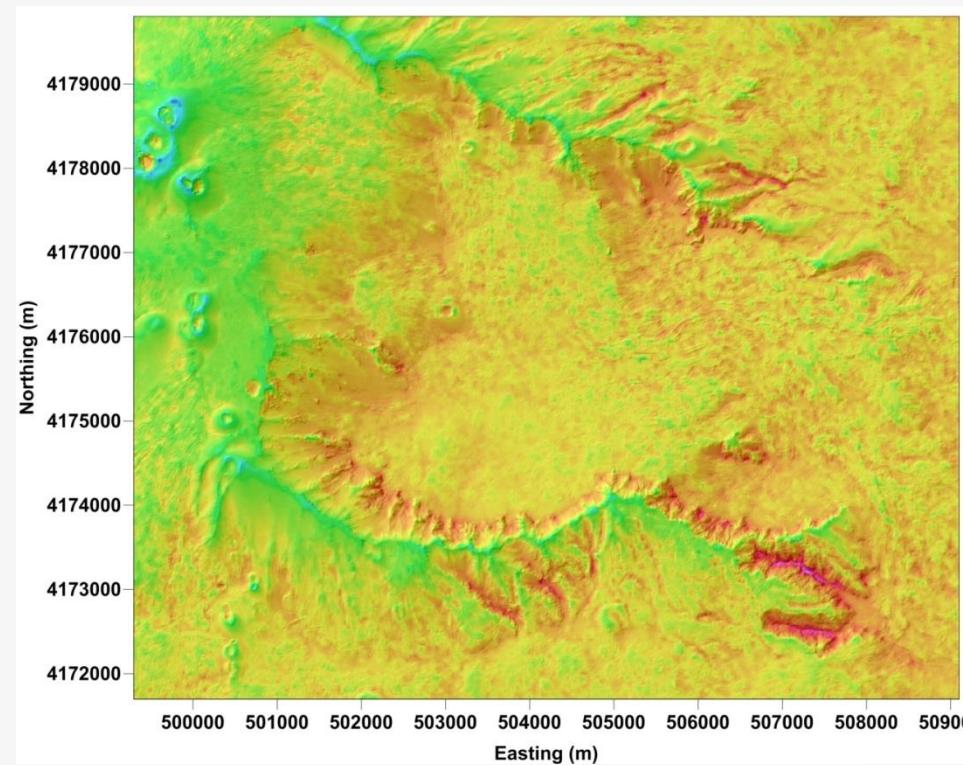

# Volcano geodesy / gravimetry

- Replacing the theoretical constant (normal) FAG by the predicted VGG in estimating the Free-Air Effect (FAE)

VGG prediction based on modelling the contribution of topo-masses to VGG

- High resolution (a few meters) high accuracy (10 cm) DTM
- Correct choice of constant reference topo-density
- Numerical volumetric Newtonian integration by means of Toposk software

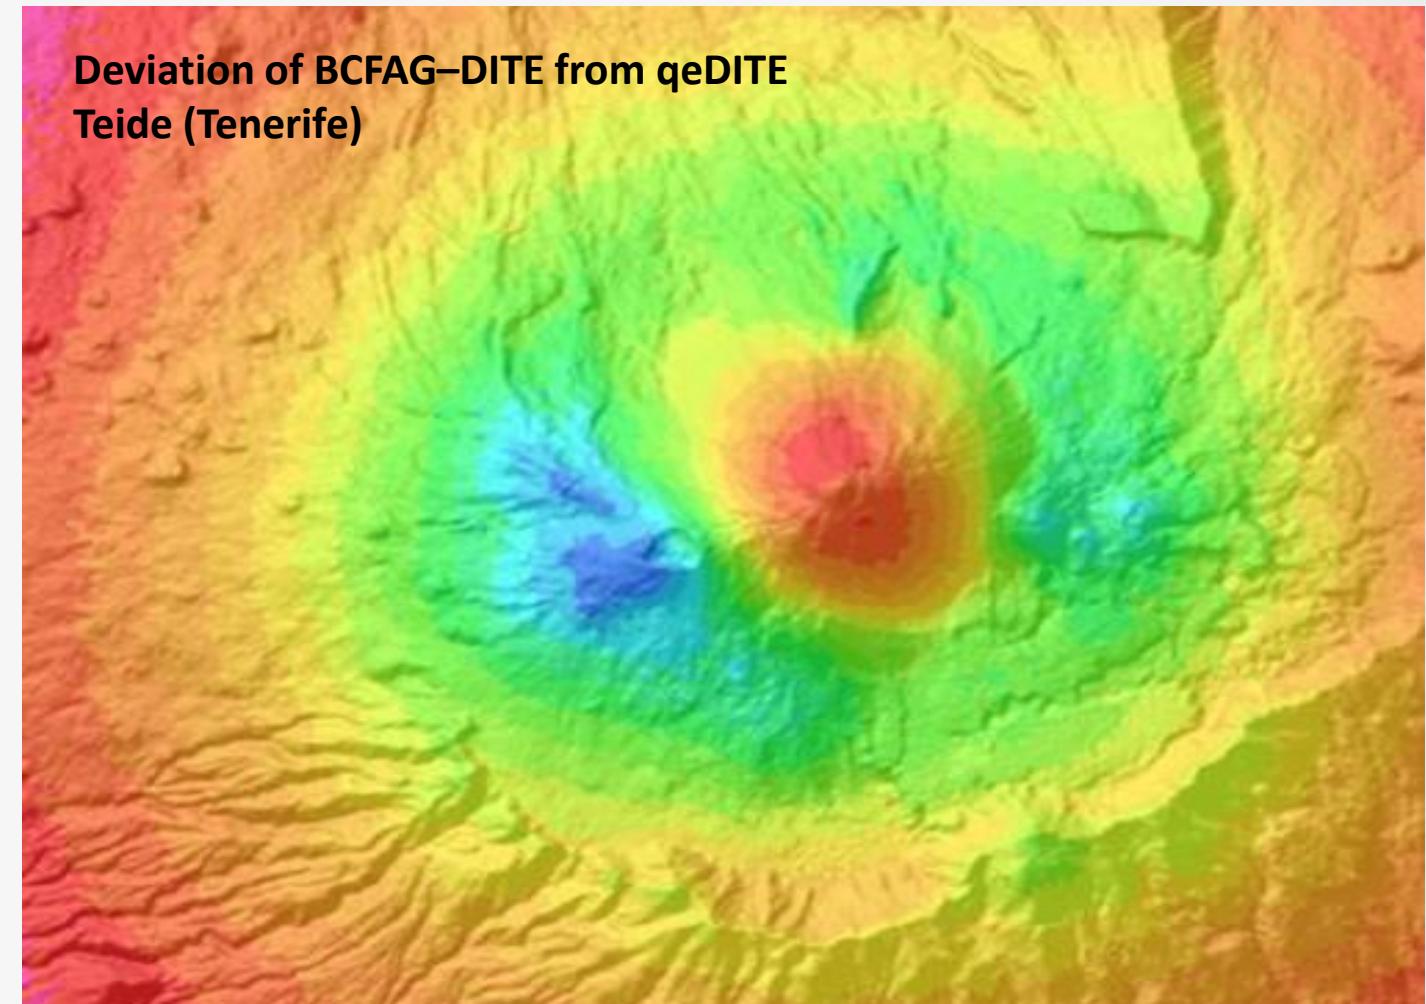

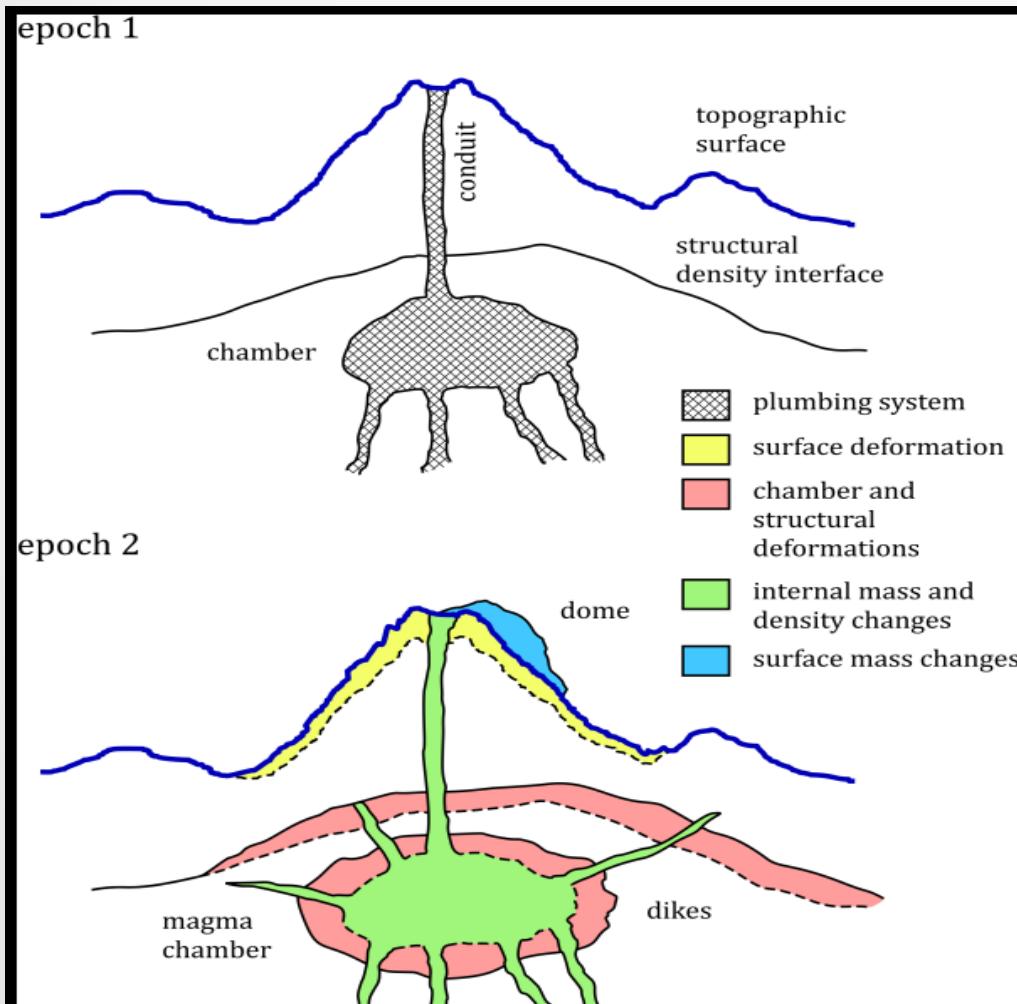

PREDICTED  
VGG FIELD

Deviates strongly from constant normal FAG in alpine and volcanic areas of prominent rugged topo-relief

ETNA

# Volcano geodesy / gravimetry

- Accurate numerical evaluation of deformation-induced topographic effect (DITE)

# Volcano geodesy / gravimetry

## SLOVAK-ITALIAN VOLCANO GRAVIMETRIC CAMPAIGN ON ETNA IN JULY 2018

- Verification of predicted VGGs by in-situ observations
  - DEM (DTM/DMR) improvement in near-zone
  - Improvement of gravimetric topo-corrections
  - Improvement of FAE, DITE, residual time-lapse, gravity changes

# Volcano geodesy/gravimetry

SLOVAK-ITALIAN VOLCANO GRAVIMETRIC CAMPAIGN ON ETNA IN JULY 2018

Zahorec Pavol, Juraj Papčo, Peter Vajda, Filippo Greco, Massimo Cantarero, Daniele Carbone (2018) Refined prediction of vertical gradient of gravity at Etna volcano gravity network (Italy). *Contributions to Geophysics and Geodesy* 48(4): 299–317, doi 10.2478/congeo-2018-0014

Vajda Peter, Pavol Zahorec, Dušan Bilčík, Juraj Papčo (2019) Deformation-induced topographic effects in interpretation of spatiotemporal gravity changes: Review of approaches and new insights. *Surv Geophys* (under review)

Vajda Peter, P Zahorec, J Papčo, D Carbone, F Greco, M Cantarero (2019) On predictability and applicability of vertical gradients of gravity in 4D volcano gravimetry: Etna (Italy) case study. *Boll Volcanol* (under review)
